PROFESSIONAL SUMMARY

Aspiring Software / AI Engineer with hands-on experience building AI-powered web applications including text-to-image generation, event management systems, and an automated interview evaluation platform. Strong in full-stack development (Python, Node.js, Express.js, Flask, MySQL), deep learning integration, and applied cybersecurity fundamentals. Proven ability to design, build, and debug end-to-end systems from database schema to user-facing interface. Currently expanding skills toward production-grade AI systems.

EDUCATION

KLE Institute of Technology, Hubli (07/2027)

Bachelor of Engineering in Computer Science and Engineering — CGPA: **6.63/10**

Government Polytechnic, Hubli (10/2021 – 06/2024)

Diploma in Computer Science — CGPA: **8.30/10**

PROJECTS

Text-to-Image Generator 01/2026

Python / Deep Learning / Diffusion Models / Flask / REST API

- Developed a web application that converts natural language text prompts into AI-generated images using diffusion model APIs.
- Designed RESTful endpoints for prompt submission, generation status polling, and image retrieval.
- Built a Flask-based backend with request queuing to handle concurrent generation requests efficiently.
- Implemented prompt validation and content filtering to ensure safe and relevant image outputs.
- Optimized image storage and retrieval using caching and compression for faster load times.

Event Management System 12/2025

Flask / SQLite / Bootstrap 5 / Python / JavaScript

- Built a full-stack event management platform supporting event creation, registration, ticketing, and attendee tracking.
- Designed role-based access control for organizers, attendees, and admins with secure authentication.
- Implemented real-time seat/slot availability tracking and automated email confirmations on registration.
- Developed an admin dashboard with analytics on registrations, attendance, and event performance.
- Used SQLite with normalized schema design for events, users, and bookings.

AI Interview Evaluation System 02/2026 – Ongoing

React (JSX) / Whisper STT / SBERT / HuggingFace / Redis Queue

- Built an AI-powered automated interview evaluation platform supporting both Technical and Non-Technical interview tracks, developed as interactive React (JSX) modules.
- Implemented resume parsing and AI-generated interview questions tailored to the candidate.
- Integrated Whisper STT for speech transcription and filler-word analysis, and SBERT for semantic similarity scoring of candidate answers.
- Applied HuggingFace emotion models for facial expression evaluation and built anti-cheat monitoring during interviews.
- Used Redis Queue for asynchronous processing of speech and video analysis pipelines.
- Designed an admin dashboard with interview replay and candidate management; college engineering project, built iteratively across five modules.

TECHNICAL SKILLS

- Programming: Python, JavaScript, Node.js, SQL.
- Frameworks: Flask, Express.js, Bootstrap 5, REST API Design
- AI / ML: Deep Learning, Diffusion Models, NLP Basics, Speech Recognition (Whisper), Semantic Similarity (SBERT)
- Databases: MySQL, SQLite
- Cybersecurity: Applied Ethical Hacking, Network Security Fundamentals
- Tools: Git, GitHub, VS Code

CERTIFICATIONS

- Cyber Security Internship (640 hrs, Project: Digital Signature Attacks) — Government Polytechnic Hubli (01/2024 – 04/2024)
- Internship in Express.js & MySQL (200 hrs) — CareerLake Education Pvt. Ltd. (01/2023 – 02/2023)
- Cyber Security and Applied Ethical Hacking — Infosys Springboard (10/2023)
- Java Essentials — Infosys Springboard (04/2026)
- Artificial Intelligence Fundamentals — IBM SkillsBuild (12/2025)
- MY Bharat Budget Quest 2026 — Certificate of Participation, Ministry of Youth Affairs & Sports (02/2026)

Aspiring Software & AI Engineer
